OWNER'S MANUAL

WATERPROOF: IPX7/JIS7

Uniden's UH835S/UH850S/UH850S-2TP radio is designed to meet the water proofing standard of IPX7/JIS7.

This Means:

Being defined as having no ingress of water when immersed at 1 metre for 30 minutes.

The radio will only meet this rating if fully assembled and all rubber seals and covers are well maintained and correctly fitted. This means that the accessory jack cover is sealed, and the battery pack and antenna are attached and securely fastened.

LITHIUM ION BATTERY PACK WARNING

- · This equipment contains a Lithium Ion Battery Pack.
- The Lithium Ion Battery Pack contained in this equipment may explode if disposed of in a fire.
- Do not short-circuit the Battery Pack.
- Do not charge the Lithium Ion Battery Pack used in this equipment in any charger other than the one designed to charge this Battery Pack. Using another charger may damage the Battery Pack or cause the Battery Pack to explode.
- · Lithium Ion batteries must be disposed off properly.

USER LICENSE INFORMATION

The citizen band radio service is licensed in Australia by ACMA Radio-communications (Citizen Band Radio Stations) Class Licence and in New Zealand by MED General User Licence for Citizen Band Radio and operation is subject to conditions contained in those licenses.

Introduction

The UH835S/UH850S/UH850S-2TP is a IPX7/JIS7 Waterproof, portable two-way UHF-CB radio. It is compact, rugged and fits easily in your hand. This hand held UHF-CB radio will give you consistent, outstanding performance in virtually all conditions and situations. To ensure that you get the most from the radio features, please read this operating guide carefully before using the unit.

FEATURES

- Narrow Band (NB) Radio
- · Communicate with up to 80 Channels in the UHF-CB Band¹
- 5W (UH850S) / 3.5W (UH835S) Max TX Power
- LOW/HIGH Switchable TX Power
 * UH835S is 1W/3.5W and UH850S is 1W/5.0W
- Waterproof (meets IPX7/JIS7 waterproof specifications)²
- · 38 Built-in CTCSS codes & additional 104 DCS codes
- · Backlit LCD Display
- One-Touch Smart Key
- · Voice Enhancer (EQL)
- Instant Channel
- 10 Call Tone
- Duplex Mode¹
- Master Scan
- · Open and Group Scan
- · Busy Channel Lockout Function
- VOX Function
- Accessory Jack
- Keypad Lock
- · Battery Type: Lithium-Ion Rechargeable
- · Low Battery Alert
- · Battery strength Indicator
- Auto Battery Save
- Roger Beep
- Scramble On/Off
- ¹ Refer to p.30 p.32 for channel information
- ² The radio meets waterproof (IPX7/JIS7) specifications only when the battery, the antenna and accessory MIC jack cap are correctly installed. The radio won't retain its waterproof rating when the accessory Speaker MIC/Earphone MIC are connected.

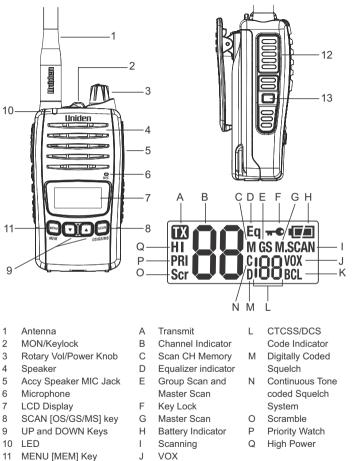

Included in your Package

ITEM	UH835S	UH850S	UH850S-2TP
UH850S UHF Radio		1	2

ĸ

Busy Channel

Getting Started

Connect Drop-in Charger with AC Adaptor

Plug one end of the AC adaptor into the wall outlet and the other end into the drop-in charger.

OR... Connect DC Charging Adaptor to Cigarette Lighter Jack

The drop-in charger and DC charging adaptor are not water proof. Ensure the radio is dry before connecting to the charger. Don't use the chargers when the ambient temperature is below 5° C (37° F) or above 40° C (108° F) Input Voltage (Cigarette Lead Charger): +12VDC to +24VDC. If Charge LED didn't light up, please confirm the above temperature.

Attaching the Antenna

Attach the antenna to the radio. Be sure the antenna is firmly seated.

Attaching the Battery Pack

- 1. Place the battery pack onto the back of the radio. It will only fit in one way.
- 2. Snap the battery release clip until it clicks. Be sure the battery pack fits tightly against the radio body.

Avoid exposing the Lithium Ion battery, attached or unattached to the radio, in direct sunshine, heated cars, or in areas with temperatures below $-20^{\circ}C$ ($-4^{\circ}F$) or above +60°C (+140°F).

Exposing the chemicals contained within the battery pack to temperatures above +60 $^{\circ}$ C (+140 $^{\circ}$ F) may cause the battery to rupture, fail or reduce performance.

In case of exposure to cell contents, wash the affected area thoroughly, and seek medical attention.

Additional battery cautions should be applied as described on p.2.

To Attach the Belt Clip:

Slide the belt clip into the catch until it snaps into place.

To Remove the Belt Clip:

Pinch and hold the belt clip latch and then slide the belt clip up and out of the catch.

Charging the Battery Pack

Your radio is powered by a specially designed Lithium Ion battery pack.

• Before operating the radio, charge the Lithium lon battery pack for 3 hours without interruption in the drop-in charger.

For the initial battery charge, make sure the radio is off for optimum charging.

The drop-in charger can charge the Lithium lon battery pack attached to the radio, in the front charging slot.

- 1. Place the radio, in the drop-in charger.
- 2. The red LED illuminates and stays ON, until fully charged.
- The charger won't overcharge the battery packs.
- 3. The green LED illuminates and stays ON after charging is completed.
- Do not transmit when the radio is in the drop-in charger!
- You can monitor incoming calls while the radio is in the drop-in charger.

Battery Level Display

The BATTERY icon at the top of the screen indicates the battery level at all times. The battery level is displayed in 4 levels.

LEVEL 4 Battery 100% full LEVEL 3 Battery approx. 40% capacity LEVEL 2 Low Battery LEVEL 1 (flashing) Empty Battery

At LEVEL 2, low battery alert will be sounded every 15 minutes.

When **(PTT)** is pressed at Level 1, an error tone sounds and transmission is disabled. Once at Level 1 the unit will automatically shutdown after 30 seconds.

Recharge the battery at any time. When the battery is empty, it will take up to 3 hours to fully charge.

Battery Life: More than 24 hoursThis is based on the following Duty Cycle:Transmit (Low Power)5%Receive5%Stand-by90%

LED Status

LED	What it Indicates
Green	Start Up/Power on
Green	Monitor mode
Green	Receiving Signal
Red	Transmitting signal

Accessory Jack Cover

Make sure the Accessory Jack Cover is firmly pushed in to maintain submersible rating.

Connecting the SPKR/MIC

Release the Accessory Jack Cover to plug in the SPKR/MIC.

Power On/Off

- 1. To turn the unit **ON**, rotate the **[ON/OFF VOL]** knob clockwise. A channel number and battery level should appear on the display.
- 2. To turn the unit **OFF**, rotate the **[ON/OFF VOL]** counter-clockwise. The display will disappear.

Volume

Rotate the **[ON/OFF VOL]** knob clockwise or counter-clockwise to adjust speaker volume to desired listening level.

Setting The Squelch

The squelch is used to eliminate any annoying background noise when there are no signals present.

Auto/Sq 1 - max sensitivity (min squelch) Sq 5 - min sensitivity (max/tight squelch)

- 1. Press [MENU/MEM] 2 times. Sq and the current squelch level will flash on the display.
- Use ▲ or ▼ to change the squelch level from Auto/1 to 5.
- 3. Press & hold [MENU/MEM] to save and exit.

Selecting A Channel

Press \blacktriangle or \blacksquare to select the desired channel.

If you press and hold \blacktriangle or \checkmark the channel numbers will scroll rapidly.

To Transmit And Receive

The radio uses the UHF-CB Channels. For your reference a list of the available channels and corresponding frequencies is printed on p.31 - p.32. (Channels 22 and 23 are for telemetry and telecommand applications, channels 61, 62 and 63 are for future use. TX is inhibited on these channels.)

The maximum RF transmit power of

UH835S is 3.5W and UH850S is 5.0W. (see Transmit Power Select, p.15.)

- 1. Before you transmit, listen for activity on the selected channel.
- 2. When the channel is clear;
- Press [PTT] to transmit at the selected Hi/Lo transmit power,

TX appears on the LCD and LED lights red during transmit.

Hold the radio with microphone approximately 5cm in front of your mouth with the antenna at approximately 45° angle away from your head. Speak in a clear, normal conversational voice.

4. When you have finished speaking, release **[PTT]** and listen for a response then TX disappears on the LCD. LED lights green while receiving a signal.

To Operate In Duplex Mode (Repeaters)

The Duplex function enables you to access local repeater stations.

You can only activate Duplex on CH01-CH08 and CH41-CH48.

UHF CB Repeaters are used to retransmit or relay your signal. Repeaters will extend the range of your radio and overcome the shielding effect caused by solid obstructions.

- Eg. CH01 is being used in your area for repeater use.
- 1. Press [MENU/MEM] 5 times.
- Press ▲ or ▼ to change the selection.
 r appears for CH01-CH08 and n appears for CH41-CH48 when duplex is selected.

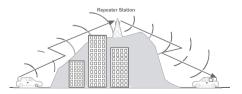

3. Press & hold [MENU/MEM] to save and exit.

Contact your retailer for a list of repeaters available in your area.

Operation with the aid of a Repeater

Transmit Power Select

This radio has two transmit power levels: Hi: 3.5 Watt (UH835S) / 5.0 Watt (UH850S) Lo: 1.0 Watt.

To change your transmit power level:

- 1. Press [MENU/MEM].
- 2. Press ▲ or ▼ to change the setting to Hi or Lo.
- 3. Press & hold [MENU/MEM] to save and exit.

Smart-key Function

The smart key **[S]** provides one touch access to one of these functions; Instant Channel, Call Tone or Equalizer.

Press & hold [S] to change the smart key function between the three options.

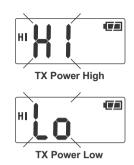

Scanning

There are 3 scanning modes; Open Scan (OS), Group Scan (GS) and Master Scan (M.SCN) (a special case of Group Scan).

During SCAN the radio only checks channels or frequencies that are in the SCAN Memory, which are indicated by the M (memory) icon. The radio maintains two SCAN Memories; one for Open Scan (OS) mode and the other for Group Scan (GS) mode, to give you flexibility and allow you to use the radio more effectively.

Group Scan and Master Scan modes share the same SCAN Memory.

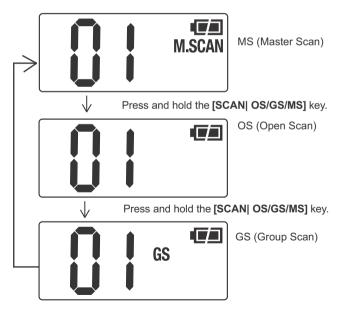

To initiate scanning,

- 1. Press [SCAN| OS/GS/MS] to start Scanning.
- 2. The SCAN icon flashes.
- 3. The scan direction can be changed at any time by pressing $\mathbf{\nabla}$ or \mathbf{A} .
- 4. Press [SCAN| OS/GS/MS] to stop Scanning.

To select scan mode,

Press and hold the **[SCAN| OS/GS/MS]** key. M.SCAN icon appears on the display.

Add/Remove Channels from Memory

1. Select which Scanning Mode you wish to use on the channel OS, GS or M.SCAN Mode.

OS is indicated by the absence of the GS or M.SCAN icon.

- 2. Select the channel you want to store by pressing ▼or ▲.
- 3. Press and hold [MENU/MEM] to store.
- 4. To remove the channel from Memory, Press and hold [MENU/MEM] to remove. M icon disappears.

MASTER SCAN Mode

MASTER SCAN is the default scan mode and is enabled to allow continual communication across congested channels.

Master Scan scans channels stored into GS Memory and only opens the squelch for signals with the correct subcode (CTCSS or DCS tone).

To achieve this, all radios in your group must have the same channels in GS memory (group channels) and use the same Subcode (CTCSS or DCS tone).

By scanning only group channels, radios in the network will be able to detect and receive group transmissions- continual communication without interruption. When transmitting in this mode, the radio switches to an unused group channel if it detects another signal with no code, or the wrong code, on the channel last used by the group. In this way, all group users will be able to have continual communication to or from other users.

CH09-CH20 are stored into GS Memory and CTCSS01 is set for MASTER SCAN Subcode by default. The GS memory can be changed,

channel by channel, if desired, but for Master Scan to work effectively each radio in the group must have the same channels in its GS memory.

To add/remove channels from GS SCAN Memory, refer the section above.

RX only Channels (CH22, CH23, CH61, CH62 and CH63) will not be included in MASTER SCAN Mode even though stored into GS Memory. Also channels for which Duplex Setting are On will be skipped in MASTER SCAN Mode.

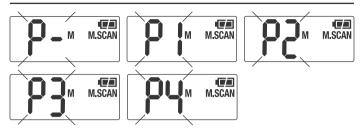

To operate in MASTER SCAN mode,

Press and hold the **[SCAN | OS/GS/MS]** key. **M.SCAN** icon appears on the display.

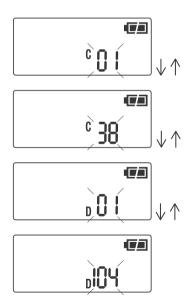

To change MASTER SCAN settings,

- 1. Press [MENU/MEM] key 8 times. The M.SCAN setting flashes.
- Change to the following setting by pressing ▼or ▲.
 - P-: Master Scan uses current CH in GS memory
 - P1: Master Scan uses CH09-20 in GS.
 - P2: Master Scan uses CH21-30, 39, 40 in GS.
 - P3: Master Scan uses CH49-60 in GS.
 - P4: Master Scan uses CH61-70, 79, 80 in GS.

Operation

- 3. Press [MENU/MEM] one more time.
- 4. Select the desired Subcode (CTCSS DCS) or by pressing ▼or ▲.

5. Press and hold the [MENU/MEM] to save and exit from the Menu Mode.

If a button is not pressed within 10 seconds the UHF CB Radio will automatically exit the Menu Mode.

Open Scan (OS) Mode

All UHF-CB have been added to the OS SCAN Memory for convenience. To add/remove channels from OS SCAN Memory, refer to p.17.

Allows continuous scanning of all selected channels. If an active channel is found, scanning will stop on that channel. If the received signal ceases, the unit will wait 2 seconds for the signal to return, otherwise scanning resumes.

After transmission in scan mode, the scan mode will be cancelled.

To select OS scan mode,

Press and hold the [SCAN| OS/GS/MS] key.

OS Mode is indicated by the absence of the GS and M.SCAN icons.

If SCAN is deactivated while on an active channel, the radio will stay on that active channel. If no channels are active, the radio will reinstate the starting channel.

Group Scan (GS) Mode

GS Mode has CH09 to CH20 in the SCAN Memory by default. Channels must be stored to the GS SCAN Memory before group scan can start. To add/remove channels from GS SCAN Memory, refer to p.17.

Includes the accessory feature Priority Watch which allows you to monitor the Instant Priority Channel while scanning (see p.22 for setting Instant Priority Channel and p.22 to turn on Priority Watch).

If scanning stops on a channel which is not a Priority Channel, UHF CB Radio will continue monitoring the Priority Channel for activity while listening to the active one.

To select GS scan mode,

Press and hold the **[SCAN] OS/GS/MS]** key. GS icon appears on the display.

Priority Channel Watch During Group Scan

The feature allows user to monitor the Instant Priority channel every 1.5 seconds during Group Scanning.

- 1. Press [MENU/MEM] 6 times. PRI setting flashes.
- 2. Press \blacktriangle or \blacksquare to change the setting on or off.
- 3. Press & hold [MENU/MEM] to save and exit.

Drop-Out Delay

While scanning, the radio stops at a busy channel and receives a signal. When the received signal is over, the unit will wait for 2 seconds for the return of the signal, otherwise, the radio resumes scanning.

Programming the Instant Priority Channel

- 1. Press [MENU/MEM] 7 times. PRI and current channel setting flashes.
- 2. Press \blacktriangle or \blacksquare to select the desired channel.
- 3. Press & hold [MENU/MEM] to save and exit.

Recalling the Instant Channel

Press [S] when Smart Key is set to Instant Channel function.

Monitor

This feature enables users to listen in for weak signals on the current channel at the press of a button.

To use monitor,

 For continuous listening. Press [MON/LOCK].

A beep tone will be heard and the receiver circuit will stay open, letting in both the noise & weak signals.

- RX LED flashes green.
- To return to normal receive mode press [MON/LOCK].

CTCSS

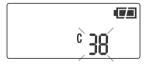

CTCSS is a feature that allows a group to talk to each other without hearing other users on the same channel.

- 1. Select desired channel.
- 2. Press [MENU/MEM] 3 times. DCS/CTCSS setting flashes.
- 3. Press \blacktriangle or \blacksquare to change the selection.
- 4. Press & hold [MENU/MEM] to save and exit.

Select oF to turn DCS/CTCSS off for the selected channel.

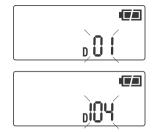

DCS

DCS is a digital extension of CTCSS. It provides 104 extra, digitally coded, squelch codes that follow after the 38 CTCSS codes. CTCSS 1-38, followed by DCS 1-104.

Follow the steps for changing CTCSS code but select DCS code as desired.

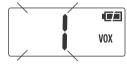

VOX

VOX is the automatic transmitting function without pressing the PTT key.

VOX appears when VOX level setting is from 1 to 5.

- 1. Press [MENU/MEM] 10 times. VOX setting flashes.
- Press ▲ or ▼ to select the desired setting. The 6 VOX levels are from 1 (low sensitivity) to 5 (high sensitivity) and Off.
- 3. Press & hold [MENU/MEM] to save and exit.

Busy Channel Lockout

This feature prevents accidental transmission on a busy channel. For example, BCL is used when CTCSS or DCS is selected to prevent transmission when the radio detects a transmission from another unit using the same CTCSS or DCS code.

1. Press [MENU/MEM] 11 times. BCL setting flashes.

- 2. Press ▲ or ▼ to change the setting on or off.
- 3. Press & hold [MENU/MEM] to save and exit.

Call Tone

The radio is equipped with 10 selectable call tones that will be transmitted when **[S]** is pressed when Smart Key is set to Call Tone function.

1. Press [MENU/MEM] 12 times. CL setting flashes.

- Press ▲ or ▼ to change the selection. The 10 call tones are CL 1 to CL 10. A sample of the call tone is sounded when selected.
- 3. Press & hold [MENU/MEM] to save and exit.

Current regulations require calling tones to be restricted to one transmission per minute. If a second transmission is attempted within one minute then an error tone will sound.

Roger Beep

Roger Beep is a BEEP that is sent to notify the end of transmission (both PTT and VOX transmission.) Roger Beep can be heard through the speaker when Key Beep is on. Roger Beep is transmitted even if Key Beep is turned off. However, Roger Beep will not be heard from the speaker.

1. Press [MENU/MEM] 13 times. rb setting flashes.

- 2. Press ▲ or ▼ to change the setting on or off.
- 3. Press & hold [MENU/MEM] to save and exit.

Кеу Веер

Assures the user that the keypad has been properly pressed by emitting a beep tone. This tone can be switched on or off.

1. Press [MENU/MEM] 14 times. bP setting flashes.

- Press ▲ or ▼ to change the setting on or off.
- 3. Press & hold [MENU/MEM] to save and exit.

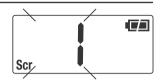

Scramble

Scramble enables private communications by scrambling the voice signal. This prevents users without descrambler equipment or a compatible unit from understanding the conversation. Select desired channel.

Scr appears when Scramble setting is from 1 to 5.

1. Press [MENU/MEM] 4 times. The Scramble setting flashes.

- Press ▲ or ▼ to select the desired Scramble setting (Off, 1-5).
- 3. Press & hold [MENU/MEM] to save and exit.

For safety purposes Scramble is invalid on channel 5, 11, 22, 23 and 35.

Keypad Lock

To prevent accidental entries, you can lock the keypad. Press and hold **[MON/LOCK]** for 1.5 seconds until it beeps to activate Key Lock. The **-•** appears.

To unlock the keypad, press and hold [MON/LOCK] again for 1.5 seconds. The **-•** disappears.

When the keypad Lock is active, an error tone will be heard if you attempt to press any key, except for the following key function; **(PTT).**

Back Lighting

The Liquid Crystal Display (LCD) is backlit for easy viewing at night or in low light situations. The back lighting automatically switches ON every time a key (except PTT) is pressed. It turns OFF 5 seconds after the last key is pressed.

Voice Enhancer (EQL) Setting

Choose from 4 different receive audio level settings to provide a natural Voice Enhancer for super clarity and performance.

Press **[S]**, when in Smart key EQL mode, to change the setting between; Off(Normal) /L1(Bass) /L2(Midrange) /L3(High)

CTCSS Codes and Frequencies

UHF-CB Channel Guidelines

Always listen on a channel (or observe the receive signal level meter) to ensure it is not already being used before transmitting.

Channels 5 and 35 are used for emergency channels. CTCSS, DCS will not operate on these channels.

Please follow these guidelines for channel use in Australia:

- · Channels 05 and 35 are Emergency Channels.
- Channel 11 is a Calling Channel.
- · Channels 22 and 23 are for telemetry and telecommand

applications, channels 61, 62 and 63 are for future use and TX is inhibited on these channels.

General communication is accepted on all other channels with these guidelines:

- Channel 40 road channel (Australia).
- Channels 01-08 (and 31-38), and Channels 41-48 (and 71-78) are repeater channels.

Important information - 80 Channel UHF-CB channel expansion

To provide all users additional channel capacity within the UHF-CB Band the ACMA introduced narrowband channel use. This allows for additional channels to be added, up to 80 Channels.

This simply means that the new narrowband radio you have purchased will have more channels than older radios. Please refer to the guidelines above and the channel chart for further channel information.

A list of currently authorised channels can also be obtained from the ACMA website in Australia and the MBIE website in New Zealand.

Interference / Poor Audio

When a new narrowband radio receives a signal from an older wideband radio the speech may sound loud, however the radio's built-in AVS (Automatic Volume Stablizer) circuit will detect and manage incoming audio to comparable levels.

Narrowband radios operating on CH41 - CH80 may encounter interference from nearby wideband radios transmitting on high power on an adjacent channel (frequency).

When an older wideband radio receives a signal from a new narrowband radio the speech may sound quiet - the wideband radio user simply adjusts their radio volume for best performance.

The above situations are not a fault of the radio but a symptom of mixed wideband and narrowband radios in current use. It is expected that as older wideband radios are phased out this issue will be eliminated.

UHF-CB Channels and Frequencies

CH No.	Simplex Mode Transmit / Receive Frequency (MHz)	Duplex Mode Transmit Frequency (MHz)	CH No.	Simplex Mode Transmit / Receive Frequency (MHz)

UNIDEN UH835S/UH850S/UH850S-2TP UHF CB Transceiver

IMPORTANT: Satisfactory evidence of the original purchase is required for warranty service

Please refer to our Uniden website for any details or warranty durations offered in addition to those contained below.

Warrantor: The warrantor is Uniden Australia Pty Limited ABN 58 001 865 498 ("Uniden").

Terms of Warranty: Uniden Aust warrants to the original retail purchaser only that the UH950S ("the Product"), will be free from defects in materials and craftsmanship for the duration of the warranty period, subject to the limitations and exclusions set out below.

Warranty period: This warranty to the original retail purchaser is only valid in the original country of purchase for a Product first purchased either in Australia or New Zealand.

Product	3 Years
Battery Pack & Accessories	1 Year

If a warranty claim is made, this warranty will not apply if the Product is found by Uniden to be:

- (A) Damaged or not maintained in a reasonable manner or as recommended in the relevant Uniden Owner's Manual;
- (B) Modified, altered or used as part of any conversion kits, subassemblies or any configurations not sold by Uniden;
- (C) Improperly installed contrary to instructions contained in the relevant Owner's Manual;
- (D) Repaired by someone other than an authorised Uniden Repair Agent in relation to a defect or malfunction covered by this warranty; or
- (E) Used in conjunction with any equipment, parts or a system not manufactured by Uniden.

Parts Covered: This warranty covers the Product and included accessories.

User-generated Data: This warranty does not cover any claimed loss of

or damage to user-generated data (including but without limitation phone numbers, addresses and images) that may be stored on your Product.

Statement of Remedy: If the Product is found not to conform to this warranty as stated above, the Warrantor, at its discretion, will either repair the defect or replace the Product without any charge for parts or service. This warranty does not include any reimbursement or payment of any consequential damages claimed to arise from a Product's failure to comply with the warranty.

Our goods come with guarantees that cannot be excluded under the Australian Consumer Law. You are entitled to a replacement or refund for a major failure and for compensation for any other reasonably foreseeable loss or damage. You are also entitled to have the goods repaired or replaced if the goods fail to be of acceptable quality and the failure does not amount to a major failure.

This warranty is in addition to and sits alongside your rights under either the COMPETITION AND CONSUMER ACT 2010 (Australia) or the CONSUMER GUARANTEES ACT (New Zealand) as the case may be, none of which can be excluded.

Procedure for obtaining warranty service: Depending on the country in which the Product was first purchased, if you believe that your Product does not conform with this warranty, you should deliver the Product, together with satisfactory evidence of your original purchase (such as a legible copy of the sales docket) to Uniden at the address shown below. You should contact Uniden regarding any compensation that may be payable for your expenses incurred in making a warranty claim. Prior to delivery, we recommend that you make a backup copy of any phone numbers, images or other data stored on your Product, in case it is lost or damaged during warranty service.
