Superseding the award-winning TRAX series, the new super slimline GPS series sees Uniden continue its commitment to providing drivers with the most realistic car navigation experience and exceptionally easy operation at an affordable price. The IGO35 is a Sleek and Stylish unit which features a bright and intuitive touch-screen display and is no thicker than an iPhone.

Making its debut alongside Uniden's renowned 3D mapping technology is a new Junction View feature which illustrates upcoming intersections. Used in conjunction with Advanced Lane Guidance, Signpost Information and Spoken Street Names, this new feature further ensure drivers receive the most accurate turn-by-turn instructions. The new GPS series has the latest school zones, fixed speed, red light cameras and railway crossings allowing any user to be assured that they have one of the most up to date software in the market.

An innovative Green Routing tool leads the GPS series' other new features. By calculating fuel consumption and carbon emissions across a number of route options, the driver can then select the journey which will have the smallest environmental impact. Alternatively, the system is also capable of calculating the fastest, shortest or easiest route from the available options.

The screen is super bright, removing glare for crystal clear viewing. It also switches automatically to night mode for easy, glare-free viewing after dark. Predictive keyboard text also reduces the destination search time and if drivers make a wrong turn in a pre-programmed destination, the system will recalculate directions immediately.

Supported by Naviextras, the IGO35 GPS unit comes with a Latest Map Guarantee, eliminating any worries drovers may have about out of date
