

March 2018

Uniden release dual-mode smart baby monitors with smartphone app for remote access

Uniden has extended the BW31xx series, to include the new BW3101R baby monitor which features an app dock to enable remote viewing from anywhere, at any time.

The new addition to the Uniden family boasts a large 4.3" colour screen and can be used remotely by connecting the monitor screen into the app dock, an accessory included in the pack. Parents can securely view their baby through the free-to-download dedicated Baby Watch app, via a smart phone or tablet, making it a handy feature for those who may have to travel interstate or internationally for work and don't want to miss a thing.

The free-to-download app includes features such as walkie talkie function, night vision and smart motion detection, giving parents the option to check-in on their child without the need to use the monitor screen. Using a secure connection, the baby monitor prompts the user to change the default password during set-up for added security.

Uniden Baby Watch features both video and audio display, and the camera is equipped with a built-in microphone so parents can hear when their child may need attention. The helpful walkie talkie function enables parents to communicate with people in other areas of the home while tending to their child. Unique to the market, the Uniden baby monitor camera includes a handy adjustable clamp, providing flexibility and ease of mounting anywhere around the nursery.

The baby monitor's advanced features continue with room temperature display as well as an audio alert and 'smart motion detection' which automatically turns on the video display if the child stirs or makes a sound. The system also includes a night light, infra-red night vision for round-the-clock monitoring and a selection of lullabies that parents can play remotely via the monitor to help soothe an unsettled baby.

Baby Watch is exceptionally easy to set up and operate. Using a secure digital wireless connection, the unit can be effortlessly moved from room to room or even out into the backyard, transmitting crystal clear video and audio signals up to a 150-metre distance. Giving further peace of mind to parents, Uniden's digitally encrypted FHSS technology protects against eavesdropping and hacking from external sources.

The Uniden Baby Watch monitor displays a detailed, wide-angle view in full colour. The BW3101R is available in a dual camera configuration (BW 3102R), enabling parents to have eyes and ears all around the house.
