

Hit the road with the right dashcam

Nearly a quarter of commuters across Australia travel 45 minutes or more one way to work¹. With drivers spending longer periods of time on the road during the busiest times of day, keeping alert and safe on the road is more important than ever.

Having the ability to record footage should an incident occur while completing the daily commute provides additional support with insurance claims, or police investigations, as well as peace of mind while out on the road.

Installing a dash cam has many driver and vehicle owner benefits. Most dash cams offer Full HD or 4K recording and wide viewing angles, ensuring important details around the vehicle can be captured with ease. Drivers using a dash cam with a rear camera, such as the Uniden 70R iGO Cam, will cover every viewing angle including incidents that occur behind the vehicle.

Having access to vehicle data recorded on a dash cam via GPS geotag functionality and 3 axis G-sensor, incorporating the direction of travel, location, vehicle speed and G-Force impact in three dimensions, enables sharing with police or insurance companies to assist with claims.

Driver assist features such as a large speedo display, speed/red light camera warning, and an advanced driver assist system, provide additional safety for long distance drivers and commuters. For safety, the lane departure warning provides a visual and audio alert when the vehicle drifts over lane marking, while headlight low LUX sensor detects low external lighting conditions and prompts the driver to turn on the headlights.

Vehicle owners parking on a busy road or street will benefit from the in-built parking sensor, designed to automatically start recording if vehicle motion or vibration is detected. Footage is stored on an SD card, which includes footage protection.
