Uniden's High Definition Widescreen LED TV is ideal for caravan, RV, Truck or boat. The TV runs on 12V to 24V DC input for mobile situations and comes with an AC adaptor to run on mains power. If you're on the water it's important to use electronics that are designed to handle the harsh marine conditions, reducing the risk of corrosion and failure. The main PC board is protected by conformal coating to reduce the risk of corrosion or failure. The TV also comes with a 5 metre 12-24V DC power cable and wall mount bracket.

The piano black high gloss finish compliments marine entertainment products and any boat interior. The DVB-T tuner receives digital broadcasts with an 8-Day Electronic Program Guide, allowing you to record and playback programs using the USB Flash Drive socket².

The built in DVD player also allows you and your family to watch your favourite movies and music videos. Use the stereo headphone jack for privacy or connect your TV with the COAX output into a third party head unit for an improved entertainment experience.

Built-In DVD

Key Features

Built-In DVD

Select the DVD input and play your favourite DVDs³
