

### Uniden releases a range of Smart Baby Cameras

Uniden has introduced two new models to its award-winning Baby Watch baby monitor range, offering parents high-tech features to keep an eye on newborns and toddlers from anywhere around the home.

The **Uniden Baby Watch BW140R and BW150R** feature smart, Wi-Fi enabled Full High Definition (1080P) cameras with remote viewing via a Smartphone or Tablet removing the need for a separate display screen. Parents can easily watch live footage via the dedicated My Uniden app, allowing smartphone and tablet users to securely view their child from another room, or parents who travel to check in while they're away.

Both Smart Baby Cameras are easy to set up and can be effortlessly moved from room to room. They are also compatible with Google Assistant and Alexa, so users can conveniently view footage and operate the camera using voice control or view using the optional smart hubs in the market.

BW150R

The camera captures crystal clear vision captures small details and special moments. Both cameras have Room Temperature Display with alerts through the app and include high-quality night vision, which is automatically enabled when darkness is detected for a better view of the baby in the evening or early morning. The selection of lullabies (including white noise) and two-way talk capability allows parents to soothe an unsettled baby remotely through their smart device, putting Uniden's Baby Watch range in a class of its own.

The BW140R comes with a cute removable, silicone cover in the shape of a panda to help the camera blend into the nursery. More colours will be available soon to purchase as an accessory. It also features a 100-degree viewing angle, ideal for monitoring cots or beds.

The BW150R features a pan and tilt camera which can be controlled remotely through the Uniden App to change the viewing angle and capture every corner of the room. The BW150 provides extra peace of mind with sound detection, which senses if babies make noise or wake from a nap, automatically sending an alert to the user's device.
