Uniden DIY tips to boost home security

With some parts of Australia experiencing an increase in home break-ins¹, now is the perfect time to look into ways to improve the security of the home.

Setting up a home security system can be done easily without the need to call in additional help, but making sure the cameras are placed in the correct position could mean the difference between an unwanted visitor in the home and a safe and secure household.

Uniden has provided five key tips on how to install DIY security cameras correctly and position them effectively to ensure the home is protected during the day and throughout the night.

1. Incorrect positioning of cameras could mean the home is not as protected as it looks. It's best to point cameras facing common entry ways for criminals, e.g. front door, back door and first floor windows
2. Placing cameras where they can be easily accessible may encourage burglars to remove or damage them, or even worse, add the camera to the stolen goods. Position security cameras up high on the outside of the home so that they are hard to reach, but still visible.
3. Sheds and garages are often where valuables, such as tools and sporting equipment, are kept. Uniden's DIY security cameras allow up to four additional cameras to be added to the system. Invest in extra cameras to keep a close eye on other important areas of the home.
4. Installing a spotlight camera, such as the Uniden motion detection spotlight camera, will improve night vision by up to 30 metres, enabling any critical detail to be captured if intruders decide to strike at night. The spotlights also act as a deterrent to would be thieves.

- Remember to download the app onto a smartphone or device before heading off on holiday. Uniden's cameras can be viewed remotely via an app from anywhere in the world. Allow push notifications in settings to receive alerts when a camera detects movement, providing peace of mind when away from the property.
