### Vehicle radio communication improved with Uniden's antenna range

Communication can be vital when on the move in a vehicle and access to reliable radio contact could be disrupted if the incorrect antenna is installed.

Uniden has a vast range of antennas available to suit any terrain and vehicle, compatible with all Uniden products and other branded UHF radios. Whether the user is driving through an urban or off-road environment the correct antenna will ensure that the in-car radio can transmit clearly and effectively.

Uniden's antennas are built with rugged and durable material and are engineered and tested to withstand the harshest conditions. Uniden offer over 15 antennas and they can be fitted to almost all vehicles including sedans, trucks, four-wheel drive and agricultural vehicles. Available in two strengths (3 and 6 dBi), it's easy to transmit the best signal in any environment, from suburban areas and rural locations, to heavily forested and hilly country.

Each antenna has unique features including flexible rubber whips for high terrain or city environments, a portable magnetic antenna for people on the move changing in and out of different vehicles, antennas with heavy duty springs to allow for tough terrain or heavy duty use, along with a four-wheel drive specific antenna.

In addition to the antenna range, Uniden also offers a variety of mounting brackets that are compatible with all Uniden antennas. The vast mounting bracket range offers users flexibility when choosing a location to fix the antenna onto the vehicle.
