Uniden announces new Titanium 2-way radio series ideal for trekkers to tradies

Uniden has released the new Titanium 2-way radio series. The Titanium family includes two five watt models, the UH850S and UH750; a 3.5 watt UH835S, a two watt UH820S and one watt UH810S radio ideal for a wide range of outdoor adventures.

Brad Hales, national marketing communications manager, Uniden Australia, commented: "We understand the needs of Australians who rely on UHF 2-way radios to keep in contact while outdoors. As a global leader in the UHF category, it was important to offer consumers useful communication tools that are exceptionally easy to use and most importantly, reliable.

"Whether it is a novice or seasoned traveller, Uniden's suite of advanced and practical features make the new Titanium 2-way radios a quality communication choice for work or leisure," continued Hales.

From hiking, biking to off-road adventures, the Titanium series offers adventurers access to 80 channels with extended long range coverage.

Built rugged for harsh Australian conditions, the Titanium series is designed to last. The UH750, UH835S and UH850S have a fully submersible waterproof body based on IPX7 waterproof standardsⁱ and have also been drop testedⁱⁱ.

A standard feature across the range is the new voice enhancer which offers four audio settings - normal, bass, midrange and high - for crystal clear conversations. For added convenience, the smart key function - available on the UH835S, UH850S, UH820S and UH810S series - lets users toggle between voice enhancer, instant channel, call tone or keypad lock as required.

UHF radios are traditionally charged using a charging cradle and AC adaptor, as well as the cigarette lead from a motor vehicle. A unique feature is the ability to recharge the UH810S and UH820S using an included USB cable, offering another convenient way of keeping charged while on the road.

All models offer open scan function to scan all channels in memory and lock on active channels. Group scan lets users select the channels they wish to monitor in a group, along with a priority channel. The radios can also operate via a local repeater station which, if available, transmits signals over a wider area of up to an additional 30 to 100 kilometres, depending on the topographical conditions.

The new Titanium series is available in single and dual pack configurations while the UH850S, UH820S and UH810S are available as a Tradies Pack. Each Tradies Pack includes two radios, two rechargeable lithium-ion batteries with desktop charger cradle and AC adaptor, a USB charge cable and cigarette adaptor, two earpiece microphones, two speaker microphones and two belt clips. The UH820S also comes with two high-visibility face plates, and all Tradies Packs come with a robust carry case to safely store all accessories.

ⁱ This means the radio can be submerged in one metre of water for 30 minutes without damage. The charger is not waterproof. The radio will only meet this rating if fully assembled with the battery pack attached securely. All rubber seals and sealing plugs must also be well maintained and correctly fitted.
